

# VISUAL EXPLORATION OF EDIBLE WILD FLORA: A FORAGING-ORIENTED MAP TOOL

Kessor Chao, Christine Sandager Søgaard & Anna Ellen Vedel Braaby

University of Southern Denmark, Odense, Denmark

## Introduction

With the world becoming more digital, finding activities to encourage people to spend more time outside is increasingly important. One such activity is foraging. Foraging is not only a means to encourage people to spend time outside, but also a means to save money on groceries, forge stronger bonds across generations and has been linked to better health. To assist people's foraging habits, we set out to build an interactive map that can provide an overview of which edible plant species are present across Denmark.

## Conclusion

Our dashboard uses principles of scientific visualization to create an interactive map that is simple for people to use. It utilizes different features to provide a simple and clear overview of edible plant observations around Denmark.
